Mosquito - The Disease Spreader

1. A mosquito lays eggs in stagnant water.
2. A mosquito uses its proboscis to pierce our skin and suck blood.
3. Mosquitoes spread diseases like malaria and dengue fever.

Prevention of Diseases

Avoid water stagnation. Keep your surroundings clean and dry.

Use mosquito nets to avoid mosquito bites.

Keep doors and windows closed or cover them with nets.

THB Help children understand the sources of stagnant water and its prevention.
