Do and Observe

The next day, Yazhini shared the mango tree's claims with her teacher. They investigated them one by one.

Investigation - 1

Do roots grow in the soil and help hold it together?

a. What do I need?

A thick paper cup, Moist soil, Fenugreek seeds, Water, A thin plastic sheet.

b. What should I do?

1. Fill the cup with moist soil and compact it gently.
2. Make a small window on one side of the cup and close it with the plastic sheet.
3. Plant a few fenugreek seeds near the window.
4. Water it regularly.
5. Observe the cup after one week.

c. What do I see? Draw.

Draw

d. Inference

From this experiment,

I infer that _____ grow into the soil, hold the soil and help the _____ stand upright.

THB Help children carry out the experiment.

Can roots grow without soil?

Try this to verify.
Keep an onion bulb with its root end in water and observe for one week.

Day - 1

After one week

From this, I infer that onion roots can grow in _____, without soil for some time.
