Let us Do

THB

Give one book each to any two children. Ask them to open any page; compare the page numbers on the left side and compare which is the larger number and which is the smaller number.

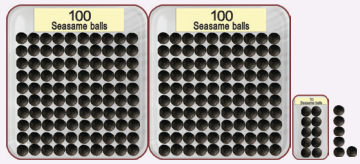

Let us Learn

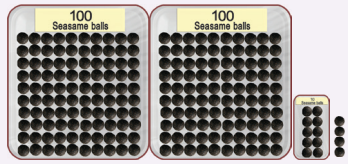

Nithya and Nilan used to eat seasame balls daily. One day they wanted to find who is having more number of seasame balls...

216 and 214

I have more seasame balls than you.

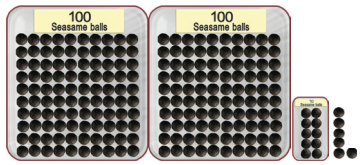

How did you find?

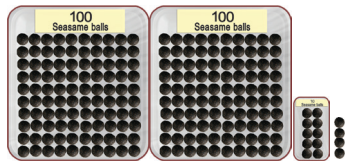

First, look at the boxes with 100 seasame balls.

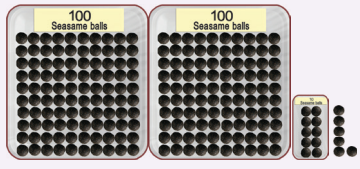

Both of us have two boxes each.

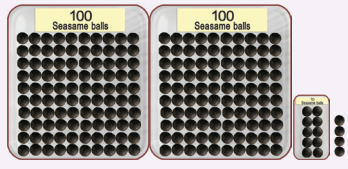

Okay, next look at the boxes with 10 seasame balls.

Both of us have one box each.

Finally, look at the single seasame balls.

You have 6 seasame balls and I have 4. You have more number of seasame balls than me.

While comparing numbers, first compare the hundreds.

If hundreds are equal, compare tens.

If tens are equal, compare the ones.

So, 216 is larger than 214.
