7. The Actual Length...

Let us Learn

To decorate a festival hall, five-cubits long flower strings were ordered from two different shops. After the decoration was completed, it was found that the strings were of different lengths. Can you tell the reason?

Let us Do

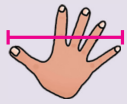

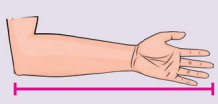

THB

Emphasise that when the length of an object is measured using non-standard units such as handspan, cubit, footspan, and pace, the measurements will vary from person to person by measuring the length of the objects in the classroom.

Let us Practise

Write the names of non-standard units of measurement and the names of objects that can be measured using them.

Measure				
Name of the units				
Name of the objects
