Joints

Activity Time

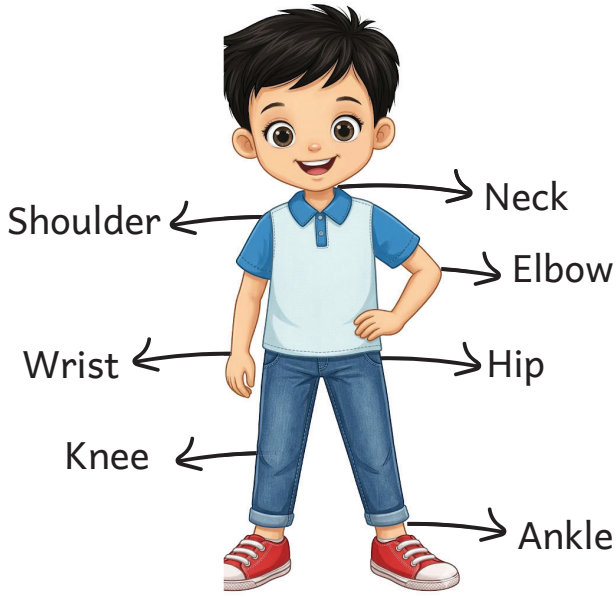

Walk like a robot without bending your knees and hands. Then walk normally. What difference did you observe?

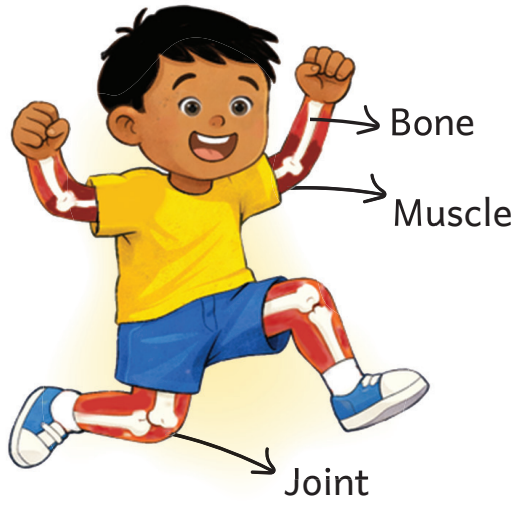

THB Guide children to do the actions like a robot.

Observe and Discuss

Bones, muscles and joints work together to help our body move.

The place where two bones meet is called a joint.

Our body has many joints - shoulders, neck, wrists, knees, ankles, hips, back, fingers and toes.

THB Explain that bones provide stability to our body, while bones, muscles and joints enable us to bend and move.
