Butterfly Mimicry - The Copycat Trick!

Some butterflies copy the colours of other butterflies. This is called mimicry. A harmless butterfly copies the bright colours of a poisonous butterfly. Birds think the butterfly is poisonous. So, they do not eat the butterfly. In this way, the butterflies stay safe.

Do and Learn

A butterfly is an insect that can fly.
It has two pairs of wings. Hindwings are smaller than forewings. The wings are very thin and have scales. Scales give the butterfly their colours.

1. Draw and colour.
