There are three types of bees.

- Worker bees build the beehive using wax from their body. They collect nectar from flowers and bring it to the hive. Bees change nectar into honey. Honey is stored in the cells.

- The queen bee lays eggs in some cells of the beehive to produce new bees.
- Drone bees help the queen bee.

Do and Learn

1. Draw the Beehive.

2. Fill in the blanks using the word bank.

a. The worker bees build the _____.

b. The worker bees make _____.

c. The _____ lays eggs.
