Special Features

- Ants communicate by touching with their antennae.
- A smell trail left by one ant is followed by other ants.

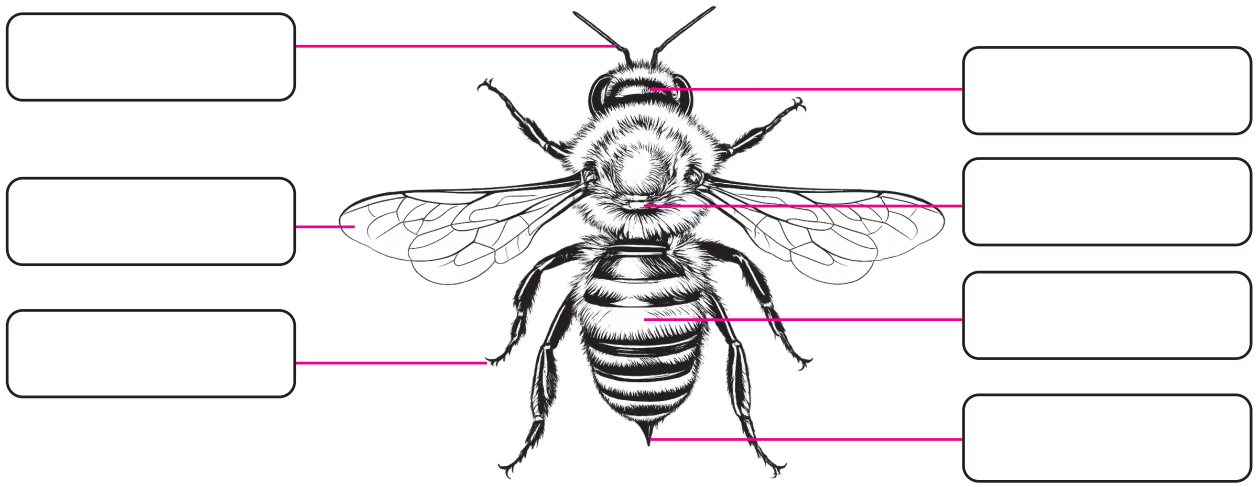

- A butterfly has a long tube called a proboscis used to suck nectar from flowers.
- A bee's stinger helps it protect itself. Do not disturb bees - a sting can be painful.

Do and Learn

1. Label the parts of the bee.

2. Compare the body parts of a butterfly, an ant and a bee and tabulate the similarities and differences.

Insects	Butterfly	Ant	Bee
Similarities			
Differences			

THB Use a similar tabulation and help children write the similarities and differences.
